# Webinar - Dr. Tim Nuttall Advances in the diagnosis and management of otitis in dogs, cats and rabbits'?

## May 12<sup>th</sup> 2020 at 20:00

Otitis is a common problem in dogs, but is also increasingly recognised in cats and rabbits. Recurrent infections are associated with progressively severe chronic changes that will eventually need surgery. It is essential to understand the pathogenesis of recurrent and chronic otitis to successfully treat these problems. In dogs, the primary, secondary, predisposing and perpetuating framework is well established but often poorly understood and used in practice. The key to successful management relies on identifying and addressing the triggers in each case.

Recent advances in diagnosis and therapy have helped this. There are also certain specific syndromes that have been better recognised in recent years, which include biofilm-associated infections, cholesteatoma and cystomatosis. This webinar will go through the latest approaches to managing otitis in dogs, cats and rabbits.

### Dr. Tim Nuttall

Head of Dermatology, University of Edinburgh Royal (Dick) School of Veterinary Studies, Roslin, UK.

Dr Tim Nuttall graduated from the University of Bristol in 1992. He is currently Head of Dermatology at The Royal (Dick) School of Veterinary Studies in Edinburgh. Tim is an RCVS Specialist in Veterinary Dermatology, with a busy clinic and active research into atopic dermatitis, microbial infections and antimicrobial resistance. He has written over 100 publications, including A Colour Handbook of Skin Diseases of the Dog and Cat, and presented over 150 lectures throughout the world.
